Fluorescent Design Inc.

Dear Liam,

I'm writing today to propose my candidacy for frontend developer at Fluorescent Design Inc. I am a highly motivated and self-started developer with a passion for coding, making, and entrepreneurship. I am a fast learner, with a proven track record for dependability and adaptability.

In 2020, I earned a full-stack web-development diploma from Lighthouse Labs. There I honed my hard-skills through building 6 responsive and tested full-stack web applications. My final project was built in under 2 weeks using Typescript, React/React Native, Node.js, Websockets, and Express.js. Since this was a group project, having strong leadership skills let me take on the role of team lead, coordinating the efforts of a small group to create an application we were all proud to have made. Since graduating I have focused my efforts on strengthening my algorithm design and data structure skills, building more projects, and learning new frameworks while increasing my skills in the languages/frameworks I am already comfortable with.

As a previous beer brewer, I am no stranger to technical work requiring constant collaboration between team members. This career has taught me many relevant soft-skills such as leadership, flexibility, attention to detail, teamwork, and grit. Having been faced with many seemingly insurmountable obstacles I have time again been given the opportunity to overcome complicated challenges, which I have done with confidence and competence.

Above all, my previous industry, like this one, cherishes individuals who are driven, capable, and technically gifted. From this point of view, I spent the last several years founding a sake brewing company. Due to COVID-19, the project was canceled, but I gained many valuable skills from the experience. Put plainly, outside of Japan, there are no resources for learning the trade. Therefore, learning the business, Japanese language, and technical aspects of sake production was an entirely self-driven process. All this to say, I am an extremely motivated and resourceful individual who will stop at no lengths to accomplish their goal.

My unique background, soft-skills, hard-skills, and technical proficiency all come together to make me a well-rounded individual, quick learner, creative problem solver, and a strong team member. Given the opportunity, I could become a great asset to Fluorescent Design Inc. Thank you for your time and consideration.

Best Regards,

Arthur Remy
